

Using Voice Chat

Voice chat allows you and your loved one to communicate via a simple voice message. You will notice that for each mobile number you link to the watch you have the option to contact the person via a phone call or a chat. The images below show you how to use this feature.

TIP: To receive a voice chat the recipient needs to have downloaded the TicTocTrack app onto their smart phone and requires their own unique user login to the app. To add additional users to your account please see the steps below.

Voice Chat display on watch

After tapping on the chat button for your linked contact on your watch, press the green microphone button to record your message. Once finished it will automatically be sent to the linked contact.

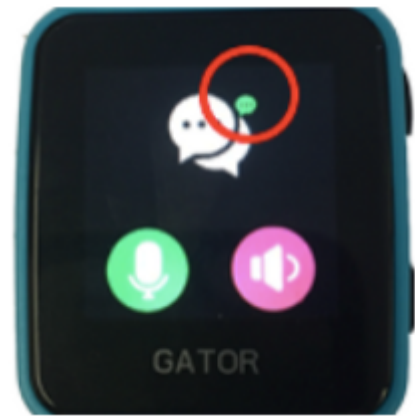

Voice Chat access from app

The contact will receive an SMS letting them know they have received a message. Once they have logged into the app they can listen to it by tapping on the avatar for the watch and choosing the voice chat button at the top of the screen.

To send a message back to the watch from the app. Simply press and hold the record button at the bottom on your screen, an animation will appear to show the message is being recorded. Messages you have sent your watch will appear in blue with messages from the watch displayed in grey.

Once someone sends a message to your watch you will hear a short tone to advise that a message has been received. The watch screen will then display a green icon next to the chat symbol. To listen to the message tap on the pink speaker icon and the message will play until finished.
